Heart attacks are caused by a build-up of plaque in your arteries. When plaque ruptures, blood clots are formed that lead to heart attack, stroke — and perhaps your last three minutes. The culprit? Plaque in your arteries is caused by too much bad cholesterol in the blood. In fact, the higher the level of bad cholesterol in your blood, the higher your risk of heart disease. Health officials estimate that more than 50 percent of all adults have unhealthy levels of cholesterol and 42 million adults have dangerously high levels — you could be one of them without even knowing. In many cases the first indication that there's a problem with your cholesterol level is a heart attack and death. Lower your cholesterol level and you'll lower your risk of heart attack. A majority of heart attacks are preventable. Yet despite all the advances in modern medicine, your fate is in your hands.

In a powerful fusion of science and nature, Bios Life C is the only supplement available that dramatically improves the cholesterol levels in your body — which is why Bios Life C is recommended in more doctors' offices than any other natural supplement. In fact, in clinical study after clinical study, researchers have proven the benefits of Bios Life C. Clinical studies suggest that Bios Life C can aid the body in lowering harmful cholesterol levels (LDL), while increasing good cholesterol levels (HDL).

The fact is, when mixed with a glass of water and consumed before eating, the ingredients in just one serving of Bios Life C go to work to help improve cholesterol levels, lower triglyceride levels, and stabilize blood sugar levels. What's more, stabilized blood sugar levels will improve your energy levels and help you feel great all day.

Over the past 10 years major companies have introduced prescription drugs to fight high cholesterol. These drugs are called "statins." Although statin drugs are effective for many people, they do have limitations and weaknesses. These weaknesses include only lowering cholesterol one way — slowing cholesterol production in the liver — and the well-documented potential of dangerous side-effects. There are actually more ways to improve cholesterol levels in your body. Yet combining four ways to help you avoid the risk of cardiovascular disease has not been achieved — until now. In a powerful fusion of science and nature, Bios Life is the only product available that combines all four of these approaches to dramatically improve the cholesterol levels in your body — which is why Bios Life is recommended by more physicians than any other natural product.

Only Bios Life combines four methods of improving and maintaining healthy cholesterol levels — in fact, this groundbreaking approach is actually patented and available only with Bios Life!

- Helps block re-absorption of cholesterol in the gastrointestinal tract
- Helps block absorption of cholesterol from digested food
- Helps reduce cholesterol produced by the liver
- Helps enhance enzymatic breakdown and removal of bad cholesterol from the body

Now for a surprise: if you're already treating your cholesterol levels with prescription statins, Bios Life will help you reduce your LDL cholesterol even further. The truth is, in addition to improving LDL and HDL levels, Bios Life lowers triglycerides — the form in which most fat exists in food as well as in your body and blood. Bios Life also has proven to stabilize blood sugar levels. No other supplement is more comprehensive for treating your entire lipid profile than Bios Life. One more thing, Bios Life's only potential side effect is weight loss (the fibre in Bios Life, when taken before a meal, makes you feel fuller, so you eat less naturally).

Recommended Usage:

For best results, take approximately 5 to 10 minutes before a main meal. Mix one scoop (6.5 g) into 8 to 10 oz. of water, juice, or comparable beverage. Stir vigorously (use of shaker cup is recommended). Drink immediately. Additional liquid may be consumed. If not taken before meal, may be taken after meal or any other time. Once your system has adjusted, use as directed above up to 3 times daily.

Ingredients:

Guar gum, gum arabic, locust bean gum, pectin, oat fibre, calcium carbonate, beta glucans, orange flavours, ascorbic acid, maltodextrin, niacinamide, d-alpha tocopheryl acetate, zinc gluconate, pyridoxine HCL, riboflavin, thiamine HCL, beta carotene, chromium polynicotinate, folic acid, biotin, sodium selenite, cyanocobalamin, phytosterols (b-sitosterol, campesterol, stigmasterol), policosanol, Chrysanthemum morifolium extract, sucralose and citric acid.

Bios Life C™
Item# 23132
60 Servings

Recommended Audience:

Men and women who have elevated cholesterol levels (LDL) or a family background of cardiovascular disease or people who want to maintain healthy blood glucose levels and improve digestive health.

Bios Life C™ Unsweetened includes all the benefits of Bios Life C™. It is clinically proven to lower cholesterol without the dangerous side effects of prescription drugs. Moreover, it contains zero sugar or sweetener. Bios Life C™ Unsweetened is also free of flavours, so you can mix it with any drink you prefer — coffee, milk, juice or just water. It is the most versatile Bios Life product, perfect for every meal and diet.
